

In re Patent Application of:  
MOREAUX ET AL.  
Serial No. 10/060,105  
Filing Date: January 29, 2002

---

In the Specification:

Please replace the paragraph beginning at page 9,  
line 15, with the following rewritten paragraph:

B<sup>1</sup>  
In practice, it is sufficient that the level V<sub>lint</sub> should become smaller than the level of the pad PAD-B by one transistor threshold. Preferably, the transistors of the inverter 200 of the comparison circuit are chosen so that they have a threshold voltage that is as low as possible. The second inverter 201 ~~for its part,~~ is supplied ~~normally,~~ normally by the two internal supply lines BV1 and BV2 ~~and-~~ enable , and enables the reshaping of the output signal of the first inverter.
